---

China's installations of wind and solar in May are enough to generate as much electricity as Poland, as the world's second-biggest economy breaks further records with its rapid buildup of...

The development of wind power and solar PV in China is mainly driven by policies. The most important top-level policy documents in the field of renewable energy are the "14th Five-Year Plan for Modern

China's mass production of cheap photovoltaic cells and wind energy have consequently spurred investments in Chinese products from around the world and expanded the construction of solar

China is the largest power producer and consumer and has the largest installed capacity of wind turbines (WTs) worldwide. In the last two decades, China's installed capacity of WTs has

China began generating solar photovoltaic (PV) power in the 1960s, and power generation is the dominant form of solar energy [103, 104]. After a long period of development and due to China's

First, the development status of wind and solar generation in China is introduced. Second, we summarize the relevant policies issued by the National Development and Reform Commission,
