The optimized energy storage system stabilizes the daily load curve at 800 kW, reduces the peak-valley difference by 62%, and decreases grid regulation pressure by 58.3%. This research

Hence, peak load shaving is a preferred approach to cut peak load and smooth the load curve. This paper presents a novel and fast algorithm to evaluate optimal capacity of energy storage

In markets where electricity tariffs are high or time-of-use pricing is applied, the combination of PV and energy storage is becoming a practical solution to optimise consumption and

Demand-side management has become a viable solution to meet the needs of the power system and consumers in the past decades due to the

Energy storage plays an essential role in modern power systems. The increasing penetration of renewables in power systems raises several challenges about coping with power
